1 HirePath Overview

HirePath is a browser based workspace for managing job opportunities and preparing for applications. It combines job tracking, application checklists, interview preparation, daily scheduling, topic research, and skill comparison in one interface.

Core Functions

Area	Purpose
Dashboard	Shows saved opportunities, tasks due today, completed topics, and quick actions.
Opportunities	Stores job details, application status, checklists, deadlines, and preparation progress.
Prep Coach	Creates focused lessons, interview tips, quizzes, and day by day preparation plans.
Today's Plan	Shows scheduled work, progress, deadlines, and manually added tasks.
Quickwiki	Searches Wikipedia for companies, skills, industries, and related terms.
Profile	Stores user details, current skills, available study time, and reminder preferences.
Settings	Controls Gemini, Demo mode, data export, data import, and data clearing.

Figure 1 HirePath dashboard

Data Storage

HirePath stores its application data in the current browser using `localStorage`. Data is therefore tied to the browser and browser profile in which it was created. Use the JSON export in Settings to keep a backup or move data to another browser.

2 Getting Started

Open the Application

1. Open HirePath in a modern browser.
2. Complete or review Your Profile so HirePath can compare skills and size preparation schedules.
3. Open Settings and choose Demo mode or configure Gemini.
4. Add a job opportunity or create a custom topic in Prep Coach.

Recommended First Time Setup

Step	Action	Why It Matters
1	Enter your name and current skills	Enables personalized headings and job skill comparison.
2	Set daily preparation minutes	Helps HirePath spread study sessions across available days.
3	Set a reminder time	Defines when an in app browser reminder may appear.
4	Choose Demo mode or Gemini	Determines whether built in samples or live AI processing are used.
5	Export data after setup	Creates a restorable backup of the local browser data.

Main Navigation

The top navigation provides Dashboard, Prep Coach, Today's Plan, and Quickwiki. The Add Opportunity button is available from every main page. The profile button opens My Opportunities, Your Profile, and Settings.

Accessibility

HirePath includes a Skip to main content link and descriptive labels for navigation, forms, progress indicators, and key actions. Keyboard users can move through controls with Tab and activate the focused control with Enter or Space where supported by the browser.

3 Dashboard

The Dashboard is the starting point for current activity. It shows the date, a personalized greeting, and direct actions for adding an opportunity or opening Prep Coach.

Progress Summary

- Opportunities shows the number of saved roles and opens the opportunity list.
- Tasks today shows the number of sessions or tasks due on the current date.
- Topics completed shows completed preparation lessons.

Quick Actions

Use the Prep Coach card to create a lesson and quiz. Use the Quickwiki card to research a company, skill, or industry without leaving HirePath.

Dashboard Workflow

1. Review the progress cards for saved roles and work due today.
2. Open the most relevant area by selecting its card or quick action.
3. Use Add opportunity when a new vacancy needs to be tracked.

4 Opportunity Management

The opportunity workspace stores each vacancy and the work needed to complete its application. The opportunity list is ordered with the most urgent roles first and can be filtered by All or Saved.

Add an Opportunity

HirePath offers three input methods. Choose the method that best matches the source material.

Method	How It Works	Important Detail
Paste advertisement text	Paste the complete vacancy text, then analyse it with Gemini or skip analysis and enter details yourself.	The pasted advertisement is saved with the opportunity.
Upload advertisement image	Choose a screenshot or photo of the vacancy.	PNG, JPG, JPEG, and WEBP are accepted up to 4 MB. The image itself is not saved.
Enter information manually	Enter known details in the form and save the opportunity.	Only the vacancy role is required. Other fields can be added later.

Manual Entry Fields

Manual entry supports the role, company, location, workplace type, salary, job URL, application deadline, follow up date, qualifications, experience, required skills, required documents, and notes. Only HTTP and HTTPS job links are saved.

Opportunity Details

- Review and edit the company, role, location, workplace type, qualifications, experience, skills, responsibilities, and document requirements.
- Set the application status to Saved, Preparing, Applied, Interview Scheduled, Offer Received, Rejected, or Closed.
- When Applied is selected for the first time, HirePath records the application date automatically.
- Add custom checklist items or use suggested application steps, then mark work complete as it is finished.
- Open Prep Coach to build a preparation plan from the full advertisement.
- Compare the job requirements with skills stored in Your Profile.

Delete an Opportunity

The Danger zone removes the opportunity together with its checklist, preparation plan, and schedule. Export a backup before deletion when the information may be needed later.

5 Prep Coach

Prep Coach builds a focused study plan from a saved opportunity or a custom topic. A generated plan can include a clear overview, a worked example, interview tips, a quick quiz, and a day by day schedule.

Figure 2 Prep Coach topic selection

Create a Plan

1. Open Prep Coach.
2. Choose Job opportunity to use a saved vacancy or Custom topic to enter a subject.
3. For a custom topic, type the subject or choose a popular option such as JavaScript, REST APIs, CSS Grid, or Communication.
4. Select Create my plan.
5. Work through the generated lessons and quiz, then use Today's Plan to follow the schedule.

Quick Definition

Use Quick definition to look up an unfamiliar word while studying. Enter a word such as stakeholder or liaise and select Define.

Gemini and Demo Mode

Live generation depends on the Gemini configuration in Settings. If no Gemini key is available, keep Demo mode enabled to use the built in sample responses.

6 Daily Plan

Today's Plan collects the sessions and tasks scheduled for the selected day. It displays the number completed, an overall progress bar, scheduled work, and upcoming opportunity deadlines.

HirePath Dashboard Prep Coach Today's Plan Quickwiki + Add Opportunity

Today's plan
Wednesday, 23 September 2026
Nothing is scheduled for today.

Daily progress 0 of 0 completed
0%

No sessions to complete today.

Plan your day
A task can stand alone or be attached to a job.

Task	Date	Minutes	Link to a job (optional)
e.g. Rewrite my CV summary	23/09/2026	30	Not linked to a job

Add task

Scheduled for today

Nothing scheduled for today

Add a task above, or let the Prep Coach build a schedule from a job's

Powered by Netlify

Figure 3 Today's Plan

Add a Task

1. Enter a task name.
2. Choose the date.
3. Set the expected number of minutes.
4. Optionally link the task to a saved job.
5. Select Add task.

Scheduled Work and Deadlines

A task may stand alone or be linked to a job. Preparation sessions created by Prep Coach also appear in the daily schedule. Opportunity deadlines appear in Upcoming deadlines when a closing date has been stored and remains open.

7 Quickwiki

Quickwiki searches Wikipedia from within the HirePath preparation workspace. Use it to understand a prospective employer, a job skill, an industry, or unfamiliar terminology.

Search for a Topic

1. Open Quickwiki.
2. Enter a company, skill, industry, or other topic.
3. Select Search.
4. Review the returned information and use it as background research rather than as a substitute for the employer's official vacancy information.

Explore by Category

Category	Use
Companies	Learn what an employer does.
Job skills	Understand tools, methods, and concepts requested by employers.
Industries	Explore sectors and common terminology.

Research Quality

Wikipedia is useful for orientation. Confirm application requirements, deadlines, salaries, and employer policies against the original vacancy or the employer's official website.

8 Profile and Reminders

Your Profile stores the information HirePath uses to size daily schedules and compare your skills with job requirements. Profile data is stored in the current browser.

Profile Fields

Field	How HirePath Uses It
Name	Personalizes the interface.
Age	Optional profile information.
Educational qualification	Records your current qualification.
Field of study	Records your subject area.
Current skills	Compares your profile with required job skills. Use comma separated names that match vacancy wording.
Daily preparation time	Spreads study sessions across available days before a deadline.
Preferred reminder time	Determines when HirePath shows its daily reminder while open.

Daily Reminders

Browser notifications depend on browser permission. HirePath can show reminders only while the application remains open in a tab. Reminders while the browser is closed would require a server based notification service.

Sign Out

Sign out returns to the opening screen. Saved jobs, plans, and schedules remain in the browser, while profile details are cleared.

9 Settings and Data Management

Settings controls Gemini behavior and the local HirePath data set. Review these options before using AI analysis or moving data between browsers.

HirePath Dashboard Prep Coach Today's Plan Quickwiki + Add Opportunity

Settings

Application settings

Your name, skills and study time live on [Your profile](#).

Gemini

Live Gemini

☐ Demo mode — use built-in sample answers instead of calling Gemini

Works offline with no key, using built-in samples.

This classroom version stores the Gemini key in your browser. A public production application must use a secure server-side proxy.

Gemini key

Paste your Gemini key

Stored only in this browser, and never written to the console or to any log.

☐ Show the key while I check it

Gemini model

gemini-3.6-flash

Default: gemini-3.6-flash. Change this if your key uses a different model.

Save Gemini settings Test connection

Your data

Stored in this browser under "hirepath-v2".

Scheduled sessions 0

Last saved Not saved yet

Export data as JSON

Import data from JSON

Choose file No file chosen

Replaces everything stored here.

Clear application data

Powered by Netlify

Figure 4 Application settings

Gemini Settings

- Demo mode uses built in sample answers and works without a Gemini key.
- Live Gemini requires a valid key and a model name. The displayed default model is gemini-3.6-flash.
- Use Test connection to check the configured key and model before relying on live analysis.
- The classroom version stores the key in the browser. A public production deployment should use a secure server side proxy.

Export and Import

1. Open Settings and review the displayed opportunity and scheduled session counts.
2. Select Export data as JSON to create a backup.
3. Store the exported file in an appropriate protected location.
4. To restore or transfer data, select Import data from JSON and choose a valid HirePath export.

Important Import replaces everything currently stored in HirePath in that browser. Export the current data first if it may be needed.

Clear Application Data

Clear application data removes the locally stored HirePath information. Export a backup before clearing data when recovery may be required.

10 Privacy Security and Limitations

Privacy Model

- HirePath stores application data in browser localStorage under hirepath-v2.
- Local storage is browser specific. Clearing browser site data may remove HirePath information.
- Use JSON export for backup, recovery, or transfer to another browser or device.
- Uploaded vacancy images are used for input but the image itself is not saved according to the application interface.

Security Guidance

- Do not use a sensitive production Gemini key in a public classroom deployment.
- For a public production application, route Gemini requests through a secure server side proxy and keep provider credentials off the client.
- Treat exported JSON files as personal application records because they may contain vacancy details, notes, schedules, and profile information.
- Use only trusted JSON exports. Import replaces the current local data set.

Current Limitations

Limitation	Effect
Browser local storage	Data does not automatically synchronize across browsers or devices.
Open tab reminders	Daily reminders are available only while HirePath is open.
Client side Gemini key	Suitable for a classroom version, but not the recommended architecture for public production.
Wikipedia research	Results are background information and should be verified against authoritative sources.

11 Troubleshooting

Issue	Checks and Resolution
Saved data is missing	Confirm that the same browser and browser profile are in use. Check whether site data was cleared. Restore a recent JSON export if available.
Gemini analysis does not run	Check whether Demo mode is intended. For live use, confirm the key and model, then use Test connection.
Notifications are unavailable	Review browser notification permission. Remember that reminders work only while HirePath is open.
A job image is rejected	Use PNG, JPG, JPEG, or WEBP and keep the file at or below 4 MB.
A job URL is not saved	Use a complete HTTP or HTTPS address.
Skill comparison is empty	Add comma separated current skills in Your Profile and use names that match the vacancy wording.
No work appears today	Add a task manually or create a preparation plan that generates scheduled sessions.
Import replaced current data	Restore the prior data only if a separate export exists. Future imports should be preceded by an export.

Support Information

When reporting an issue, record the page, the action attempted, the visible message, the browser name and version, and whether Demo mode or live Gemini was active. Do not include a Gemini key in screenshots or support messages.

12 Quick Reference

Goal	Where to Go	Action
Save a vacancy	Add Opportunity	Paste text, upload an image, or enter details manually.
Track an application	My Opportunities	Open the role, update status, and use the checklist.
Prepare for an interview	Prep Coach	Choose a saved job or custom topic and create a plan.
Plan daily work	Today's Plan	Add a task or follow scheduled preparation sessions.
Research a topic	Quickwiki	Search a company, skill, or industry.
Compare skills	Your Profile	Add current skills using vacancy style names.
Back up data	Settings	Export data as JSON.
Restore data	Settings	Import a HirePath JSON export after backing up current data.

Key Terms

Term	Meaning
Opportunity	A saved job vacancy and its associated application information.
Preparation plan	Lessons, interview guidance, quiz content, and scheduled study work.
Demo mode	An offline mode that uses built in sample answers instead of calling Gemini.
localStorage	Browser storage used by HirePath to keep data on the current browser profile.
JSON export	A downloadable backup of the HirePath data set.

Application Status Reference

Status	Use
Saved	The vacancy has been stored but active preparation has not yet started.
Preparing	Application or interview preparation is in progress.
Applied	The application has been submitted. HirePath records the first applied date.
Interview Scheduled	An interview has been arranged.
Offer Received	The employer has made an offer.
Rejected	The employer did not progress the application.
Closed	Tracking is complete or the vacancy is no longer active.
